

Balance of payments – France • May 2022

The current account deficit widened in May

The current account deficit reached 3.9 billion euros in May (seasonally and working-day adjusted data) compared with 2.7 billion euros in April. The goods deficit increased (-11.4 billion euros in May after -10.1 billion in April) due to the deterioration of the deficit of goods excluding energy (-3.5 billion euros in May against -1.5 billion in April). The energy bill decreased slightly (deficit of 7.9 billion euros in May against 8.6 billion in April). The services surplus remained stable at 5.3 billion euros in May after 5.6 billion in April.

The financial account (non-seasonally adjusted) showed net capital inflows of 5 billion euros. Portfolio investment recorded net investments abroad of 54.2 billion euros, offset by net inflows in loans and borrowings of 61.9 billion.

Current account balance and its components (billion euros, seasonally and working-day adjusted data)

Methodological notes relating to pages 1 and 3

(1) Data on trade in goods are FOB-FOB values, which means without cost, insurance and freight. This expenditure is recorded in the services item. Exchanges of goods cover General merchandise published by the Directorate General of Customs and Excise (DGDDI) on one side, merchandising and methodological adjustments calculated by the Banque de France, on the other side. In order to ensure the comparability of French balance of payments with those of other countries and conformity with the international standards, the international standard for Balance of Payments statistics is released under the aegis of the International Monetary Fund. The key concept for the balance of payments is the concept of economic ownership which is consistent with the national accounts.

(2) Services other than travel (tourism and professional travels), transport services, professional and management consulting services, R&D and development and technical services, trade-related and other business services include manufacturing, maintenance and repair, construction, insurance and pension services, financial services, charges for the use of intellectual property, telecommunication, computer and information services, personal, cultural and recreational services and government goods and services.

(3) Income includes primary and secondary incomes. Primary income refers to the flows received by economic agents for their participation in the production process ("compensation of employees") or for the provision of financial assets ("investment income") or for the rental of natural resources ("rent"). Taxes and subsidies on products and production are also included in primary income. Secondary income records current transfers between residents and non-residents. A transfer is a transaction that involves the provision of a good, service, financial asset or another non-produced asset without receiving something of economic value in exchange.

(4) The "other investment" (loans and deposits) component of the financial account includes all transactions in financial assets and liabilities with non-residents that do not concern direct investment, portfolio investment, financial derivatives or reserve assets. In practice, this mainly concerns bank deposits and interbank lending, as well as loans and deposits made by insurance companies and all kinds of investment companies and funds.
