## Monetary developments – France • March 2022

### Over one year, growth in overnight deposits is unchanged at 8.5%

On an annual basis, growth of overnight deposits is unchanged in March at +8.5% (+8.5% in February and +8.4% in January).

The growth rate of the M2 - M1 aggregate slows down very slightly (+4.0%, down from +4.2% in February) due to a modest decline of term deposits with agreed maturity of up to 2 years (-9.5%, down from -9.1% in February 2022) and a slight decline in the growth rate of saving accounts (+6.2%, down from +6.4% in February).

The M3-M2 aggregate contracted again in March (-3.3%, down from -3.2% in February and -7.0% in January) mainly due to a decline in money market fund shares/units (-7.3%, down from -3.9% in February).

After taking into account gross monetary external liabilities and assets vis-à-vis other monetary union members, the growth rate of the French component of the M3 aggregate is stable in March 2022 (+6.1%, after +6.0% in February).

(Annual growth rate in %)

## Additional information

The outstanding amount of monetary claims (excluding coins and banknotes) consists of claims with an initial maturity of up to and including 2 years that monetary counterparts (basically households, non-financial corporations, general government excluding central government, insurance corporations, non-money market funds, investment funds and financial vehicle corporations) hold against monetary financial institutions (deposit-taking institutions, *sociétés de financement* under French law, Caisse des dépôts et consignations, MMF and the central bank).

Saving accounts include regulated saving accounts, i.e. *livrets A*, *livrets de développement durable*, *comptes d'épargne logement*, *livrets d'épargne populaire*, and non-regulated saving accounts, i.e. *livrets jeunes* and *livrets ordinaires*. One part of the amounts held on regulated saving accounts is transferred by deposit-taking institutions to a fund managed by the Caisse des dépôts et consignations; the other part remains in banks' balance sheets. Debt securities with maturity of up to 2 years mainly include certificates of deposit (short term paper) issued by French deposit-taking institutions and subscribed by neither MMF nor deposit-taking institutions counterparts.

Annual growth rates are adjusted for reclassifications and revaluations but not for foreign exchange rate effects.

With this publication, the method of seasonal adjustment (SA) of money aggregates has been revised, resulting in small revisions (for example, the annual growth rate of resident resources included in M1 is +8.3% in August 2021, compared to 8.6% with the old method). The changes consist in switching to the X13-ARIMA method, instead of TRAMO-SEATS, and in adjusting the sum of the twelve monthly seasonally adjusted flows of a calendar year to the annual sum of gross flows.
