

18 August 2023

## Performance of investment funds – France • June 2023

### The annual performance of non-money market funds is +5,8% in June

The annual performance of non-money market funds increases significantly and reaches +5.8% in June (versus +1.1% the previous month). The annual performance of equity funds (+14%) is correlated with the orientation of the stock market and contributes highly to this trend. Over two years, annual performance is flat, since 2022 was a year of underperformance, which also explains the "base effect" of the recovery in the growth rate observed in 2023. The monthly performance of all non-money market funds increases in June (+1.1%)

The annual performance of the money market funds continues to improve (+31 bps) reflecting the impact of the ECB's key interest rate in the previous months and increases to +1.7% in June.

Additional information

The different categories of funds under review are defined by the Autorité des Marchés Financiers (AMF – French Financial Markets Authority). The classification of each fund is based on its real risk exposure. The definition of the exposure and the risk thresholds for each category are developed in AMF Instructions 2011-19, 2011-20 and 2011-21.

The **Stoxx 600 index** comprises 600 companies residing in 18 European countries.

The **Barclays Euro Aggregate Bond Index** is a broad-based flagship benchmark that measures the investment grade, euro-denominated, fixed-rate bond market with residual maturity over one year, including treasuries, government-related, corporate and securitized issues. Inclusion is based on currency denomination of a bond and not country of risk of the issuer.

The performance of the indices is measured by total return (price change and coupons/dividends reinvested). The yield spreads between these indices and the performance of UCITs in France reflect differences in composition and management orientation, in particular the split between highly liquid sovereign bonds issued by major advanced countries, less liquid sovereign bonds or bonds with a higher risk/return profile and bonds issued by private issuers.
