Additional information

The different categories of funds under review are defined by the Autorité des Marchés Financiers (AMF – French Financial Markets Authority). The classification of each fund is based on its real risk exposure. The definition of the exposure and the risk thresholds for each category are developed in AMF Instructions 2011-19, 2011-20 and 2011-21.

The **Stoxx 600 index** comprises 600 companies residing in 18 European countries.

The **Barclays Euro Aggregate Bond Index** is a broad-based flagship benchmark that measures the investment grade, euro-denominated, fixed-rate bond market with residual maturity over one year, including treasuries, government-related, corporate and securitized issues. Inclusion is based on currency denomination of a bond and not country of risk of the issuer.

The performance of the indices is measured by total return (price change and coupons/dividends reinvested). The yield spreads between these indices and the performance of UCITs in France reflect differences in composition and management orientation, in particular the split between highly liquid sovereign bonds issued by major advanced countries, less liquid sovereign bonds or bonds with a higher risk/return profile and bonds issued by private issuers.
