(c) including direct investment (equity capital and reinvested earnings)

Financial investment of **non-financial corporations (NFC)** increases during 2019 Q1, mainly driven by net crossed-border loans. Meanwhile, NFC continue to sell securities, although at a slower pace than in the previous quarters. Their source of financing remains broadly in line with past figures whether for bank credit or issuances of debt securities , NFC raise money by borrowing from banks or issuing debt securities.

In 2019 Q1, financial investment made by **households** slows down, albeit remaining at a high level. Households significantly consolidate their deposits, especially the transferable ones. The sale of non-MMF investment fund shares is compensated by the purchase of unlisted shares and other equities. The flow of investment in life insurance contracts is still high, especially in non-unit linked contracts. Households borrowing from banks continues to be dynamic at a fast rate.
