

Statistical release

26 April 2024

Euro area economic and financial developments by institutional sector: fourth quarter of 2023

- As of April 2024, ECB quarterly financial accounts provide new details on household holdings of investment fund shares/units broken down by underlying asset and counterpart sector. Notably, household exposure to rest of world assets is primarily through indirect holdings via investment fund shares
- Euro area <u>net saving</u> increased to €833 billion in four quarters to fourth quarter of 2023, compared with €751 billion one quarter earlier
- Household <u>debt-to-income ratio</u> decreased to 87.0% in fourth quarter of 2023 from 92.8% one year earlier
- Non-financial corporations' <u>debt-to-GDP ratio</u> (consolidated measure) decreased to 67.1% in fourth quarter of 2023 from 71.6% one year earlier

New details on household assets

The ECB is from now on releasing more detailed data on household holdings of investment fund shares/units broken down by underlying asset and by counterpart sector, thereby providing further insights into households' indirect exposures. Investment funds allow investors to gain exposure to a large number and variety of assets without buying them directly. Investment fund holdings amount to about one tenth of the total financial assets held by euro area households and are the fourth largest asset class after deposits, unlisted shares (for example, ownership in private businesses), and insurance and pension savings.

¹ This is referred to as looking-through investment fund shares. For brevity the term investment fund shares is used for non-money market funds investment fund shares/units.

These new experimental data on households' indirect exposures can be used to more accurately analyse the financial balance sheet of households and their exposure to different asset classes and counterpart sectors. The methodology and calculations have been prepared in close collaboration with euro area national central banks. The data are derived from several datasets available at the ECB: securities holding statistics by sector, investment fund statistics, and financial accounts data.

Households prefer indirect over direct exposures especially for assets issued by the rest of the world (i.e. where the issuers/debtors do not reside in the euro area), with the share of rest of the world in total assets increasing from 2% before the look-through to 9% afterwards (see Chart 1, which shows selected financial assets directly held by households vis-à-vis counterpart sectors in 2023 Q4, and the resulting breakdown by counterpart sectors after looking-through investment funds). Considering the financial instrument breakdown, the look-through leads to higher estimates especially for the households' exposures to listed shares (from 5% to 9% of households' assets) and debt securities (from 3% to 7%). For more details see the note on looking-through households' investment in investment fund shares in the quarterly financial accounts.

Chart 1
Households' financial assets by counterpart sector; selected financial instruments*

Source: ECB.

Notes: Discrepancies between totals and their components may arise from rounding.

This chart refers to financial instruments for which the counterpart sector breakdown is available: deposits, loans, debt securities, listed shares and investment fund shares/units. In addition, the counterpart sector breakdown for insurance, pension and standardised guarantee schemes (F.6) is an estimate. (See the methodological note on the ECB's website: Extension of the who-to-whom presentation to insurance and pension assets).

Total euro area economy

Euro area <u>net saving</u> increased to €833 billion (7.3% of euro area net disposable income) in 2023 compared with €751 billion in the four-quarter period ending in the third quarter of 2023. Euro area <u>net</u>

European Central Bank

Directorate General Communications, Global Media Relations Division Sonnemannstrasse 20, 60314 Frankfurt am Main, Germany

<u>non-financial investment</u> increased to €605 billion (5.3% of net disposable income), mainly due to increased net investment by non-financial corporations and government, while net investment of households was broadly unchanged (see Chart 2).

Euro area <u>net lending</u> to the rest of the world increased to €281 billion (from €200 billion in the previous quarter) reflecting net saving increasing more than non-financial investment. Net lending of households grew to €457 billion (4.0% of net disposable income) from €393 billion. Net lending of non-financial corporations decreased to €220 billion (1.9% of net disposable income) from €236 billion, and that of financial corporations decreased to €120 billion (1.0% of net disposable income) from €125 billion. Net borrowing by general government decreased, contributing thus less negatively (-€516 billion or -4.5% of net disposable income, after -€554 billion) to euro area net lending.

^{*} Net saving minus net capital transfers to the rest of the world (equals change in net worth due to transactions).

transactions in these financial instruments were interbank operations as other MFIs² redeemed liabilities with the Eurosystem (-€947 billion), decreased deposits with the Eurosystem (-€488 billion) and increased deposits and other assets with other MFIs (€693 billion). Financial investment of households involved to a large extent transactions vis-à-vis other MFIs (€192 billion), mostly in the form of deposits, as well as the financing of government through purchases of debt securities (€187 billion). Non-financial corporations' largest financing component (€90 billion) was from within the NFC sector, mostly in the form of loans and listed shares, while financing from other MFIs amounted to €56 billion. The largest financial transactions vis-à-vis the rest of the world were other MFIs' financial investments (€345 billion).

^{*} Financial instruments for which the counterpart sector breakdown is available: deposits, loans, debt securities, listed shares and investment fund shares/units.

² Other MFIs include banks and money market funds but exclude the Eurosystem.

Households

Household <u>financial investment</u> increased at a broadly unchanged annual rate of 2.1% in the fourth quarter of 2023. Among its components, currency and deposits (0.9% after 0.5%) and debt securities (61.6% after 59.8%) grew at higher rates. This acceleration was mostly offset by slower growth of investments in shares and other equity (0.2% after 1.0%) and life insurance (-0.4% after 0.2%), while pension schemes grew at an unchanged rate (2.6%).

Households increased investment in debt securities was again driven by net purchases of debt securities issued by general government, MFIs and other financial institutions. Households were overall net sellers of listed shares, due to net sales of listed shares of non-financial corporations, while they purchased listed shares of all other sectors and the rest of the world (i.e. shares issued by non-euro area residents), (see Table 2 below and Table 2.2. in the Annex).

The household <u>debt-to-income ratio</u>³ decreased to 87.0% in the fourth quarter of 2023 from 92.8% in the fourth quarter of 2022. The household <u>debt-to-GDP ratio</u> also decreased, to 53.6% in the fourth quarter of 2023 from 56.7% in the fourth quarter of 2022 (see Chart 3).

Chart 3Debt ratios of households and non-financial corporations

Data for debt ratios of households and non-financial corporations (Chart 3)

Non-financial corporations

<u>Financing</u> of non-financial corporations increased at an annual rate of 0.7% in the fourth quarter of 2023, after 0.5% in the previous quarter. This higher growth resulted mainly from an acceleration in financing by loans (1.1% after 0.8%), driven by loans from other financial institutions, and trade credits (0.9% after 0.0%). Financing by the issuance of shares and other equity grew at an unchanged rate (0.2%), while the growth rate of debt securities issuance decreased (1.7% after 1.9%, see Table 3 below and Table 3.2 in the Annex).

^{*} Outstanding amount of loans, debt securities, trade credits and pension scheme liabilities

Data for financing and financial investment of non-financial corporations (Table 3)

Non-financial corporations' debt-to-GDP ratio (consolidated measure) decreased to 67.1% in the fourth guarter of 2023, from 71.6% in the fourth guarter of 2022; the non-consolidated, wider debt measure declined to 126.2% from 133.4% (see Chart 3).

Chart 4 below shows the main components of the non-financial corporations' debt (in dark blue) vis-àvis counterpart sectors. At the end of 2023, the non-financial corporations' debt in the form of loans and debt securities was held primarily by MFIs (37%), other non-financial corporations (29%), the rest of the world (13%) and other financial institutions (11%).

^{*} Items not shown include: pension schemes, other accounts payable, financial derivatives' net liabilities and deposits.

** Items not shown include: other accounts receivable and prepayments of insurance premiums and reserves for outstanding claims.

Notes

- These data come from a second release of quarterly euro area sector accounts from the European Central Bank (ECB) and Eurostat, the statistical office of the European Union. This release incorporates revisions and completed data for all sectors compared with the first quarterly release on "Euro area households and non-financial corporations" of 9 April 2024.
- The euro area and national financial accounts data of non-financial corporations and households are available in an interactive dashboard.
- The debt-to-GDP (or debt-to-income) ratios are calculated as the outstanding amount of debt in the reference quarter divided by the sum of GDP (or income) in the four quarters to the reference quarter. The ratio of non-financial transactions (e.g. savings) as a percentage of income or GDP is calculated as sum of the four quarters to the reference quarter for both numerator and denominator.
- The annual growth rate of non-financial transactions and of outstanding assets and liabilities (stocks) is calculated as the
 percentage change between the value for a given quarter and that value recorded four quarters earlier. The annual growth
 rates used for financial transactions refer to the total value of transactions during the year in relation to the outstanding stock
 a year before.
- Hyperlinks in the main body of the statistical release lead to data that may change with subsequent releases as a result of
 revisions. Figures shown in annex tables are a snapshot of the data as at the time of the current release.

- 1) Households and non-profit institutions serving households.

- 1) Households and hori-priori institutions serving noiseholds.
 2) Calculated as 100*(x(t)-x(t-4))/x(t-4) where x(t) stands for the transaction or end-of-quarter stock x in quarter t, and x(t-4) for the transaction or stock four quarters earlier.
 3) Net adjustment for the change in net equity of households in pension schemes (receivable payable).
 4) Changes in inventories, acquisitions less disposals of valuables and acquisitions less disposals of non-produced non-financial assets (e.g. land, licences).
 5) Annual growth rates for financial transactions are calculated as 100*(f(t)+f(t-1)+f(t-2)+f(t-3))/F(t-4) where f(t) stands for the transactions in quarter t, and F(t-4) for the end-of-quarter stock value four quarters earlier.
- 6) Loans granted, prepayments of insurance premiums and reserves for outstanding claims and other accounts receivable.
- 7) Financial derivatives' net liabilities, pension schemes and other accounts payable.

 8) Debt is equal to loans received and presented as a percentage of gross domestic product (GDP).

Table 2.2 Households 1): investment by counterpart sector, for selected financial instruments (EUR billions)

1) Households and non-profit institutions serving households.

2) Annual growth rates for financial transactions are calculated as 100*(f(t)+f(t-1)+f(t-2)+f(t-3))/F(t-4) where f(t) stands for the transactions in quarter t, and F(t-4) for the end-of-quarter stock value four quarters earlier.

3) Calculated as 100*(x(t)-x(t-4))/x(t-4) where x(t) stands for the transaction or end-of-quarter stock x in quarter t, and x(t-4) for the transaction or stock four quarters earlier.

¹⁾ Calculated as 100°(x(t)-x(t-4))/x(t-4) where x(t) stands for the transaction or end-of-quarter stock x in quarter t, and x(t-4) for the transaction or stock four quarters earlier.

2) As a percentage of net value added in the case of net entrepreneurial income and net saving.

³⁾ Changes in inventories, acquisitions less disposals of valuables and acquisitions less disposals of non-produced non-financial assets (e.g. land, licences).

⁴⁾ Annual growth rates for financial transactions are calculated as 100*(f(t)+f(t-2)+f(t-3))/F(t-4) where f(t) stands for the transactions in quarter t, and F(t-4) for the

end-of-quarter stock value four quarters earlier.

⁵⁾ Other accounts receivable, and prepayments of insurance premiums and reserves for outstanding claims.6) Other accounts payable, financial derivatives' net liabilities and deposits. 7) As a percentage of gross domestic product in the case of debt.

⁸⁾ Loans received and debt securities issued; on a consolidated basis (excluding positions between non-financial corporations).

⁹⁾ Loans received, debt securities issued, pension schemes and trade credits; non-consolidated (including intra-sectoral positions)

¹⁾ Annual growth rates for financial transactions are calculated as 100*(f(t)+f(t-2)+f(t-3))/F(t-4) where f(t) stands for the transactions in quarter t, and F(t-4) for the end-of-quarter stock value four quarters earlier.

2) Calculated as 100*(x(t)-x(t-4))/x(t-4) where x(t) stands for the transaction or end-of-quarter stock x in quarter t, and x(t-4) for the transaction or stock four quarters earlier.

¹⁾ Annual percentage changes are calculated as 100*(x(t)-x(t-4))/x(t-4) where x(t) stands for the transaction or end-of-quarter stock x in quarter t, and x(t-4) for the transaction or stock four quarters earlier.

²⁾ Changes in inventories, acquisitions less disposals of valuables and acquisitions less disposals of non-produced non-financial assets.

³⁾ Annual growth rates for financial transactions are calculated as 100*(f(t)+f(t-1)+f(t-2)+f(t-3))/F(t-4) where f(t) stands for the transactions in quarter t, and F(t-4) for the end-of-quarter stock value four quarters earlier.

⁴⁾ In line with existing conventions, the financial investment of the government excludes financial derivatives, prepayments of insurance premiums and reserves for outstanding claims and other accounts receivable, and the financing of the government excludes the net incurrence of liabilities via financial derivatives, shares and other equity, pension schemes and other accounts payable.

⁵⁾ Other accounts receivable, financial derivatives and prepayments of insurance premiums and reserves for outstanding claims.

⁶⁾ Other accounts payable, pension fund reserves, financial derivatives and unlisted shares and other equity.
